

Lyo-Compatible MMLV-RT Product Handling Guide

Shipping:	On Dry or Blue Ice
Catalog number:	MDX042
Batch No.:	See vial
Concentration:	See CoA

Store at -20 °C

Storage and stability:

Lyo-Compatible MMLV-RT is shipped on dry or blue ice. On arrival store at -20 °C for optimum stability. Repeated freeze/thaw cycles should be avoided. Thawing during transportation does not affect the product performance. Solutions should be mixed/equilibrated after each thawing to avoid phasing.

Expiry:

When stored under the recommended conditions and handled correctly, full activity of the kit is retained until the expiry date on the outer box label.

Safety precautions:

Read and understand the SDS (Safety Data Sheets) before handling the reagents. Hardcopies of the SDS will be provided with the first shipment, thereafter they will be available upon request.

Quality control:

Bioline operates under ISO 13485 Quality Management System. Lyo-Compatible MMLV-RT and its components are extensively tested for activity, processivity, efficiency, heat activation, sensitivity, absence of nuclease contamination and absence of nucleic acid contamination.

Notes:

This reagent has been manufactured under 13485 Quality Management System and is suitable for further manufacturing use as an IVD component.

Description

Lyo-Compatible MMLV-RT is a glycerol-free high concentration reverse transcriptase and dilution buffer. Lyo-Compatible MMLV-RT is added to a glycerol free qPCR mix to create a Lyo-ready 1-step RT-qPCR mix for subsequent lyophilization.

Kit components

Table 1

Component
Lyo-Compatible MMLV-RT*
Enzyme Dilution Buffer, 10x

Users Guidelines

Prepare the following working solutions immediately prior to formulating RT-PCR mix:

- 1x Enzyme Dilution Buffer
 - Dilute Enzyme Dilution Buffer 10-fold in nuclease-free water
- 100x Lyo-Compatible MMLV-RT**
 - Dilute Lyo-Compatible MMLV-RT* to 6 U/μL in 1x Enzyme Dilution Buffer†

Master mix preparation

Recommended reagent volumes per 20 μL RT-qPCR mix are given in Table 2.

Table 2

Reagent	Volume
Lyo-compatible qPCR mix, 2x	10 μL
100x Lyo-Compatible MMLV-RT**	0.2 μL
Primer-Probe Mix, 20x	1 μL
Water	x μL
Total volume	Up to 20 μL

*Enzyme concentration is provided in the Lyo-compatible MMLV-RT Certificate of Analysis

**Lyo-Compatible MMLV-RT suggested concentration in the final reaction is 0.06 U/μL

†Do not freeze the 100x Lyo-Compatible MMLV-RT

Dispense into reaction vials and immediately transfer into a freeze-dryer and run a suitable drying cycle.

For long-term storage at ambient temperatures, the lyophilized product from the freeze-dryer should be packaged at low relative humidity conditions.

Assay setup

Rehydrate the lyophilized RT-qPCR mix in the reaction vials with 20 μL template-containing solution and run RT-qPCR.

The RT-qPCR conditions in Table 3 are an example when working with Lyo-Ready qPCR Mix with amplicons of up to 200 bp, however conditions can be varied to suit different polymerases and machine-specific protocols.

Table 3

Step	Temperature	Time	Cycles
Reverse transcription	45 °C - 50 °C	10 min	1
Polymerase activation	95 °C	2 min	1
Denaturation	95 °C	5 s	45
Annealing/Extension	60 °C	20 s
